

Agar Experiment Student Worksheet: Conclusions

1. Antibiotics don't cure the cold or flu, what should the doctor recommend or prescribe to patient A to get better?

2. Methicillin used to be used to treat a *Staphylococcal* infection, what would happen to Patient C's infection if they had been prescribed Methicillin?

3. If you had some amoxicillin left over in your cupboard from a previous chest infection, would you take them later to treat a cut on your leg that got infected? Explain your answer.

4. Patient D doesn't want to take the prescribed flucloxacillin for their wound infection.

"I took more than half of those pills the doc gave me before and it went away for a while but came back worse."

Can you explain why this happened?
